Making Productivity Visible to Everyone[®]

Operation Model for Maximizing Profitability

Profits for contractors are in a decline, as the size of jobs gets larger; only contractors that can improve productivity through better management of time, cost and quality will survive. The productivity improvement principles that have helped other industries, such as automotive, manufacturing, commercial airplane producers and the retailing industry can be applied very effectively in the contracting industry.

This course addresses how to prepare for the new labor market realities.

Principles that have increased:

- Productivity of labor
- Project
- Office management
- Operational theories

These will assist the contractors in coping with shifting markets, and lessons learned from other industries. Participants will learn the implementation steps for an Optimal Construction Business Model that will improve productivity and profits by better than 30%.

The seminar is based on research conducted by MCA for the construction industry.
